PORT AUTHORITY CONDITION SURVEY PROGRAM

The Port Authority Condition Survey Program was established in 1984 to provide structural inspection services to all facilities both on a schedule and immediate basis

Baseline condition surveys are performed by the Engineering Department for all PA structures. These condition surveys are followed up by periodic inspections on a cyclical basis established by the Engineering Department. The purpose of the condition survey is to determine the overall condition of the structure and to identify all structural and non-structural deficiencies.

The following is a listing of Baseline Condition Surveys performed on the WTC complex:

1985 Northeast & Southeast Plaza Buildings (4 & 5 WTC)

1986 Sub grade Levels, Concourse, Plaza & River pump Station

1987 U.S. Custom House (6 WTC)

1987 Hotel (3 WTC)

1989 Tower B (2 WTC)

1991 Tower A (1 WTC)

1997 7 WTC

670-P
